SGS Approval	Signature	Date

Final approval and acceptance of the thesis is contingent upon the submission of the final copy of the thesis to the School of Graduate Studies (SGS) through the School Graduate Committee (DGC/SGC) of the candidate’s department.

Stamp of SGS Date: _____

ACKNOWLEDGEMENT

First of all, thanks to God, the Lord of existence and the most Merciful. Secondly, a sincere thanks and appreciation goes to my advisor, Tamru Yihun (PhD) and Co-advisor Mr. Girma S. for their valuable guidance and in depth understanding that they extended to me during the entire work of this thesis. I am highly thankful to my office for their unreserved support. I also take this opportunity to record my sincere thanks to my beloved family for their endless patience, encouragement, and Love has contributed a lot for the completion of this proposal. Finally, I would extend my sense of thanks to all who, directly or indirectly, have lent their helping hand in this work.

ABSTRACT

The purpose of this study was to examine the effect of human resource management Practices on employees' performance in the case of Enore Enereand Meger Woreda Public Sectors in Gurage Zone. Accordingly, the design that was used to conduct this research was descriptive and explanatory research design with mixed research approach. The population of the study consists of all permanent employees of Enore Enere and Meger Woreda Public Sectors. The required data were collected from sample employees and leaders taken from the sectors. The researcher employed a stratified random sampling technique to draw representative respondents of 292 employees for survey and purposive (judgmental) sampling technique was used for selecting representative sample of five public sector leaders for interview. Both descriptive and inferential analyses were used to see the extent of implementation of study variables and relationship & effect of independent variables on dependent variable respectively. The descriptive analysis results showed that numbers of employee were not fully satisfied on level of practice of hiring, training, career opportunity, performance appraisal and compensation in the study area. Also, employees are not fully performing their tasks. The result of regression analysis indicated that hiring, training, career opportunity, performance appraisal and compensation practices had significant effect on employee performance in the study area at 5% significant level. Furthermore, the value of R^2 showed that 70.3% of variations in employee performance were explained by HRM practices. Thus, it is recommended that the public sectors should able to improve the employee's performance by improving practice of HRM dimensions namely hiring, training, career opportunity, performance appraisal and compensation.

Key words: *Employee Performance, Human Resource Practice, Reward Management, Performance Appraisal, Training, Compensation*

CHAPTER ONE

INTRODUCTION

1.1. Background of the study

Employees' performance is affected by different factors. One of the influential factors that affect employees' performance is human resource management practice. According to Singh and Biniam (2016) human resource management is the policies, practices, and systems that influence employees' behavior, attitudes, and performance many companies refer to HRM as involving "people practices". There are several important HRM practices that should support the organization's business strategy: analyzing work and designing jobs, determining how many employees with specific knowledge and skills are needed (human resource planning), attracting potential employees (recruiting), choosing employees (selection), teaching employees how to perform their jobs, and preparing them for the future (training and development), evaluating their performance (performance management), rewarding employees (compensation), and creating a positive work environment (employee relations). An organization performs best when all of these practices are managed well. At companies with effective HRM, employees and customers tend to be more satisfied, and the companies tend to be more innovative, have greater productivity, and develop a more favorable reputation in the community.

In the last ten years, organizations especially in Africa have been hit with the undisputable fact that the creation of competitive advantage lies in people. However, little attention was paid to human resource management issues and its impact on employee performance. The emphasis on traditions and socio-cultural issues injected an element of subjectivity in personnel manager functions such as recruitment and selection, performance appraisal, promotion, demotion, and compensation. In today's competitive and rapidly changing business world, organizations especially in the service industry need to ensure maximum utilization of their resources to their own advantage; a necessity for organizational survival (Quansah, 2013).

The research studied by Tarekegn (2013) on 'the history of human resource management practices in Ethiopia' value mentioning. The author underscores the importance of human resource management practices in developing country context with particular focus on Ethiopia. As the author confirmed, the recent growth and expansion of public and private organizations added to the flow of multinational companies in to the country has triggered the need for

strategic human resources management practices. The researcher described that strategic human resource management has unmatched importance to transform the overall socio-economic situation of Ethiopia.

The practices are designed and implemented in such a way that human capital plays a significant role in achieving the goals of the organization. The existing literature on the area of management practice shows that there is a strong positive relationship between HRM practices and employee performance (Sels et al., 2019). The proper use of HRM practices positively influences the level of employer and employee commitment. HRM practices such as training and development, performance appraisal, and compensation encourage the employees to work better in order to increase the organizational performance (Purcell & Kinnie, 2020).

According to Inyang & Akaegbu (2014), the public sector is an institution of government and is established mostly to provide goods and required services to the general public in efficient and effective manner. Furthermore, in modern governance, the public service is regarded as the nerve center of the government administration (Olubunmi & Adesopo, 2017). Study by Bason (2018), found the public sector departments and firms have vital role in economic, development, political, social welfare of society. Therefore, public servants (employees) are expected to perform competently in providing these services to the society. Enore Enere and Megerworeda is one of emerging woreda in Gurage Zone which was established in 2018 G.C and consists of 27 public sectors. This study investigated the effect of HRM practice on employee performance of Enore Enere and Meger Woreda public sectors. In fact, one of the recurrently observed problems of the woreda public sectors refers to HRM practices and employees' performance. Specifically, the most relevant HRM practices of the woreda public sectors selected for the study are hiring, training, career opportunity, performance appraisal and compensation, because these five HRM practices in the study area seem ineffective and inefficient. As a result, insignificant changes are observed in the actions of the employees. However, effective implementation of those HRM practices significantly contributes to organizational results is that the HR practices affects the employees in a positive matter, by increasing job satisfaction and motivation, which in turn affects the operational results, such as the quantity and quality of the products and services, which again will have positive effect on the financial and market performance of an organization. Therefore, this study was investigated the effect of selected HRM practice namely hiring,

training, career opportunity, performance appraisal and compensation on employee performance in Enore Enere and Megerworeda public sectors.

1.2. Statement of the Problem

To ensure effective organizational sustainability, the public sectors must be aware of the employee's knowledge, skill, ability and interest to perform their task well. This is basically achievable through efficient human resource management. Human resource management has become more important to general management because of its role in enhancing performance, securing and developing the talents of employees and enhancing cooperation between them to support organizational development (Elarabi & Johari, 2014). However, the public sectors are branded by different human resource related problems like higher employee turnover; reduced employees' desire to learn and apply new skills; decrease employees' productivity; and low morale (Davis, 2005). Same is true in Enore Enere and Megerworeda public sectors and such problems are often considered as the manifestation of HRM failure when the capacity building practices are failed to accommodate both the organizational goals and employees' needs as well.

As, the observations of conducted by the researcher, Enore Enere and Megerworeda public sectors do not apply manuals and procedures of hiring, training, career opportunity, performance appraisal and compensation properly. The improper implementation of these manuals and procedures may result inconsistent practices and unfair treatment of employees. The observations the researcher in the sectors, staff members are not satisfied with their wellbeing in terms of compensation i.e. wages and benefits. There is no sufficient salary and benefit as well as poor career opportunity in the sectors. However, Emebet (2017) point out that, providing well-defined and result-oriented reward and compensation system as well as creating conducive work environment in the sector has substantial influence on motivating employees, resulted in enhancing their commitment in the long run.

The other problem is that promotion is not based on performance, lack of transparency, weak follow up, and loose linkage between performance and reward are the problems seen in human resources management practices in the sectors. Due to these motives employee lateness and absenteeism is high. According to Woreda's 2021 annual report on average 10% of employees were late and absent for work per month. Also, the annual report indicated a large

number of employees have been moved to other private and non-governmental organization (i.e rate of employees' turnover was 2.7%). To the contrary, Noe (2008) emphasized that it is extremely crucial for the public sector to retain their valued employees and also evident that significant costs would incur in hiring, training, developing and retaining new employees. Further, what makes the situations worse is hiring is not effectively implemented and most of employees have no written job descriptions.

SNNPRS performance appraisal policy and procedure stated that a person who got a score of 95% and above performance evaluation result in a year has to receive a recognition letter and financial benefit, but still not implemented in practice and employees in the discussion explain which tends to the staff dissatisfied. These will impact on individual performance. Moreover, the capability development practice of study sectors is insufficient. According to the 2021 annual report of the sectors indicated that on average of only 12% of employees got access to training for two terms yet training needs of employees are not properly identified and its sectors HR directorate do not evaluate continuously the outcomes of the training through employee performance after trained them up. On the contrary Surbhi (2015) evaluation of training program is the most critical part of the training process and the HR manager should evaluate the program by focusing on the results achieved after training

Many studies like Hameed et al.(2014) and Oluigbo and Anyiam (2014), as well as Quartey and Esther (2013) supported a positive relationship between perceived compensation practice and employee performance. In contrast, the study of Bowra (2012), did not found relationship between perceived compensation practice and employee performance. The study of Khalid et al. (2014) provided empirical evidence on the positive relationship between career opportunity and employee performance. The study also argued that the career planning practice provided by organizations inspires the individual employees in the organization to excel in performance. Study by Falola et al. (2014) and Issahaku et al (2014) provided evidences that training & development positively influence employee performance. Fair performance appraisal is a critical tool for the organization in order to get the best of its employees' performance (Dello Russo, Miraglia & Borgogni, 2017) and the use of performance appraisal is well-known and current need (Pichler et al, 2016).

However, there was no study made on addressing effect of human resource management practice on employee performance in EnoreEnere and Megerworeda public sectors in Gurage Zone. So, there is a need for further research in the area of effect of selected human resource management practice on employee performance in public sector to fill the knowledge gap about public sector practices. Though, some factors or limitations in HRM practice are mentioned above as reasons for factors affecting employee performance in Enore Enere and Megerworeda public sectors, it was not supported by comprehensive and sufficient data. There is evidence of gaps that discusses the effect of human resource management practice on employee performance. Therefore, this study expected to fill these gaps. From the above studies (listed in above) none of them investigated the effect of hiring, training, career opportunity, performance appraisal and compensation as a model on employee performance in the public sector. Hence, this study expected to fill the existing limitation of empirical research gap through conducting the study using this model. Taking these problems in to consideration, this study was investigated the effect of HRM practice on employee performance with particular focus on hiring, training, career opportunity, performance appraisal and compensations a case of Enore Enere and Meger Woreda public sectors in Gurage Zone.

1.3. Objectives of the Study

1.3.1 General Objective

The general objective of this study is to investigate the effects of human resource management practice on employee performance a case of EnoreEnere and MegerWoreda public sectorsin Gurage Zone.

1.3.2 Specific Objectives

The specific objectives of the study are as follows:

- ✓ To examine the effect of hiring on employee performance in the study area
- ✓ To examine the effect of training on employee performance in the study area
- ✓ To analyze the effect of career opportunity on employee performance in the study area
- ✓ To analyze the effect of performance appraisal on employee performance in the study area
- ✓ To explore the effect of compensation on employee performance in the study area

1.4. Research Hypothesis

Based on the research problems the researcher develops the following null (Ho) hypotheses

Ho1: Hiring has no significant effect on employee performance in the study area.

Ho2: Training has no significant effect on employee performance in the study area.

Ho3: Career opportunity has no significant effect on employee performance in the study area.

Ho4: Performance appraisal has no significant effect on employee performance in the study area.

Ho5: Compensation has no significant effect on employee performance in the study area.

1.5. Significance of the Study

The study was focused on the effect of HRM practice on employee performance with particular focus on hiring, training, career opportunity, performance appraisal and compensation in Enore Enere and Meger woreda public sectors in Gurage Zone. For this reason; the findings of this study may contribute to the sector's managements to re-examine which human resource management practices element most dominantly affects their employee performance and they may design practical strategies.

It will be helpful to reconsider human resource management practices are one of the important determinant factors for employee performance by other public organizations available in Gurage Zone.

For the researcher, it provides the opportunity to communicate and familiarize with research materials for the research community; it builds confidence to conduct the research independently for the future. Addition to these, it serves as a bench mark to conduct deep and professional research on the research topic area and help as other researchers.

1.6. Scope of the Study

The research focused on public sectors of Enore Enere and Meger woreda in Gurage Zone which is selected purposively, because of their nearness to home place of researcher & helps to save time and minimize cost. The study intentionally considered human resource management practices in its five dimensions of hiring, training, career opportunity, performance appraisal and compensation as an independent variable and employee performance as dependent variable. The study used both descriptive and explanatory research design. The study used both quantitative and qualitative data gathering approaches

1.7. Limitation of the Study

Human Resource Management practice is too broad and it is very difficult to cover all its elements on this research. It is limited to only five human resource management elements. The research only focused to public sectors of EnoreEnere and Meger Woreda in Gurage Zone by excluding private sectors in the Woreda which is directly related with time, and availability of other resources. The constituents of behavior outcomes used under this study may not be equally applicable in all public sectors having different background. This study is based on cross sectional data, which may not show the time lag effects of the variables under study. This study confined only to limited in public sector, so, the finding of this study may not represent all the institutions. The study faced lack of awareness and willingness of few employees regarding, filling out the questionnaires or providing the required data with care and being unable to return the questionnaire on time basis. However, the researcher used different approaches to solve the limitations.

Therefore to minimize the above limitations and validate the data the analysis achieved the four multiple linear regression assumptions

1.8 Definition of Key Terms

Human Resources: are the people employed by a company or the department in a company in charge of hiring, training, benefits and records.

Human resource management (HRM): is a process that specializes in securing and increasing skills of individual employees and enhances communication and cooperation between them to support organizational development (Elarabi & Johari, 2014).

Human Resource Management Practices: are set of practices used by organization to manage human resources through facilitating the development of competencies that are firm specific, produce complex social relation and generate organization knowledge to sustain competitive advantage (Minbaeva, 2005).

Employee performance: it is considered as an integral part of the growth process of an organization, it fosters employee commitment towards the organization (Indris, 2017).

1.9. Organization of the Study

The paper includes five chapters. Chapter one is introductory chapter and is focuses on background of the study, statement of the problem, research questions, objective of the study, hypothesis, significant of the study, scope of the study, and limitation of the study. Chapter two comprises a review of related literature on theoretical review of study variables, empirical reviews on the relationship between HRM practices and employee performance. It also includes conceptual framework of the study. Chapter three includes research methodology focuses on description of study area, research approach, research design, types and source of data, sampling technique and procedure, data collection method, validity, reliability, data analysis technique, and ethical considerations. Chapter four includes analysis of data, interpretation and discussion. Chapter five presents summary of major findings, conclusions, recommendations and further research directions.

CHAPTER TWO

REVIEW OF RELATED LITERATURE

This chapter deals with review of various literatures on the issue of human resource management practices and employee performance. In the theoretical section the paper presents different definitions, concepts, theoretical review and models of the study, empirical review and conceptual framework of the study.

2.1. Theoretical Review

2.1.1 Concept of Employees Performance

Employee performance is typical to the human resource field where it can refer to the ability of employees to achieve organizational goals more effectively and efficiently. It involves all aspects which directly or indirectly affect and relate to the work of the employees. It is one measurement of work results in determining individual attributes such as ability and experience, organizational supports such as resources and technology and work effort, the point at which individual level of motivation comes directly to be involved. Employee performance can also be seen as an aggregate value to an organization's set of behaviors that an employee contributes both directly and indirectly to organization goals (Stephen & S., 2016).

Employee performance is considered as an integral part of the growth process of an organization, it fosters employee commitment towards the organization. Employees align their goals and objectives with those of the organization and feel responsible for the overall well-being of the organization. As their efforts are in turn appreciated by the management and suitably rewarded, they have immense job satisfaction. In such situation, employees are committed to achieving their goals and thus have a positive effect on the overall performance of the organization (Indris, 2017).

Human resource is very important as the backbone of every organization as well as the main resource to the organization. The organizations invest huge amount on the human resource capital that will ultimately increase the performance of the organization. Performance is a major multidimensional construct aimed to achieve results and has a strong link to strategic goals of an organization (Ghafoor, Ahmad and Aslam, 2011) cited in Monsor, etal.(2014) they

confirmed that, the performance is the key element to achieve the goals of organization which helpful for the achievement of the organizational goals.

The right employee training, development and education at the right time will provides big payoffs for the employer increased productivity, knowledge' loyalty and contribution. The contribution and improvement of organizational performance is primarily through development of people as individuals, work group and as members of the wider organization. Performance of any organization largely depends on the performance of its employees. Successful organizations are increasingly realizing that there are number of factors that contribute to performance but human resource is clearly the most critical (Mello, 2005).

2.1.2. Definition and Concept of Human Resource Management

Human resource management is the process through which management builds the workforce and tries to create the human performances that the organization needs (Boxall and Purcell, 2016).

Human resource management (HRM) is concerned with all aspects of how people are employed and managed in organizations. It covers the activities of strategic HRM, human capital management, know-ledge management, corporate social responsibility, organization development, resourcing (workforce planning, recruitment and selection and talent manage-ment), learning and development, performance and reward management, employee relations, employee well-being and the provision of employee services. It also has an international dimension (Armstrong, 2014).

According to Armstrong (2014) HRM is defined as the managerial utilization of the efforts, knowledge, capabilities and committed behaviors which people contribute to an authoritatively coordinated human enterprise as part of an employment exchange (or more temporary contractual arrangement) to carry out work tasks in a way which enables the enterprise to continue into the future.

According to Cathrine (2015) as the idea behind the assumption that HRM significantly contributes to organizational results is that the HR practices affects the employees in a positive matter, by increasing job satisfaction and motivation, which in turn affects the operational results, such as the quantity and quality of the products and services, which again will have positive effect on the financial and market performance of a company.

2.1.3. Objectives and Role of Human Resource Management Practice

According to Armstrong and Taylor (2014), the goals of HRM include support the organization in achieving its objectives by developing and implementing HR strategies that are integrated with business strategy, contribute to the development of a high-performance culture, ensure that the organization has the talented, skilled and engaged people it needs, create a positive employment relationship between management and employees and a climate of mutual trust and encourage the application of an ethical approach to people management.

Although Mathis and Jackson (2008) sought that HR management plays a significant strategic role in organizations where there are identifiable core competencies that relate to people, organizational effectiveness is enhanced. Strategic HR management plays a significant role in the strategies of organizational productivity, customer service and quality and financial contributions.

2.2 Human Resource Management Models

According to Mathis and Jackson (2008), various models of human resource management various models of HRM have been developed from time to time by different teams of the researchers. All these models have helped the HR practitioner to effectively manage the human resources. Some of the important models have been discussed as follows:

2.2.1. Guest Model

Guest comparative model (Guest, 2007) works on the premise that a set of integrated HRM practices will result to superior individual and organizational performance. It advocates a significant difference of HRM from PM. It holds that HRM strategies like differentiation, innovation, the focus on Quality and cost reduction will lead to practices like better training, appraisal, selection, rewards, job designs, involvement, and security leading to more quality outcomes; commitment and flexibility. It will then affect performance in that productivity will increase; innovation will be achieved as well as limited absences, labor turnover, and conflict or customer complaints.

2.2.2. Warwick Model

This model was developed by Hendry and Pettigrew (2013) at center for strategy and change, in Warwick University. It emphasizes on analytical approach to HRM. It also recognizes the impact

of the role of the personnel functions on the human resource strategy content. The researchers focused their research on mapping the context, identifying the inner (organizational) and external (environmental) context.

2.2.3. Harvard Model

The Harvard model (Beer *et al.* 1984) works as a strategic map to guide all managers in their relations with employees and concentrates on the human or soft aspect of HRM. It strives at employee commitment not control. It also works on the premise that employees needed to be congruent, competent and cost effective.

2.2.4. Michigan Model

The Michigan model (Devanna *et al.*, 1984) focuses on hard HRM. It holds that people should be managed like any other resources and so obtained cheaply, used sparingly, developed and exploited fully. It also emphasized the interrelatedness of HRM activities. According to this model, selection, appraisal, development and rewards were geared towards employees and organizational performance.

2.3 Dimensions of Human Resource Management

This study was investigated the effect of selected HRM practice on employee performance with particular focus on hiring, training, career opportunity, performance appraisal and compensation as a model.

2.3.1 Hiring

The hiring process is the function of human resource department. It is a process that involves reviewing the applications, selection of the right candidates for interview, testing the applicants, performing the pre-employment tests and choosing the most qualified candidate for the job” (Wayne & Martocchio, 2016). Hiring is an essential process in an organization because it brings new talents that facilitate creativity and growth.

The hiring process involves various other aspects such as job design, job analysis, job description and creation of awareness. Otoo *et al.* (2018) indicate that the hiring process is the main determinant of a successful organization. The companies that have effective hiring process are likely to have good reputation and financial performance. Grabara *et al.* (2016) narrates that there are two critical phases of the hiring process. The first phase is the attraction of the large pool of

qualified individuals, while the second one is the ability of the human resource manager to select the right people to hire. The efficacy of recruitment process is determined by the ability of the organization to attract large pool of qualified employees and handling the selection process efficiently and effectively.

2.3.2 Training

According to Mathis, and Jackson (2008) training is defined as the process whereby people acquire capabilities to perform jobs. Training provides employees with specific, identifiable knowledge and skills for use in their present jobs. Strategic training is linked to how the organization accomplishes its organizational goals. It can have numerous organizational benefits. First, strategic training enables HR and training professionals to get intimately involved with the business, partner with operating managers to help solve their problems, and make significant contributions to organizational results. Additionally, a strategic training mindset reduces the likelihood of thinking that training alone can solve most employee or organizational problems. Effective training requires the use of a systematic training process. The four phases of such a process are assessment, design, delivery, and evaluation. Using such a process reduces the likelihood that unplanned, uncoordinated, and haphazard training efforts will occur. A discussion of each phase of the training process follows (Mathis & Jackson, 2008).

Assessing organizational training needs represents the diagnostic phase of a training plan. This assessment considers issues of employee and organizational performance to determine if training can help. Needs assessment measures the competencies of a company, a group, or an individual as they relate to what is required in the strategic plan. It is necessary to find out what is happening and what should be happening before deciding if training will help, and if it will help, what kind is needed (John O'Connor,2006)

2.3.3 Career Opportunity

Career opportunities are identified through job analysis. The manager should identify career path for employees in the organization. He should discuss with the employees what jobs are available in the organizational hierarchy and at the same time find where the employee would want to go up in the organization in future. The employees should be provided information regarding job postings that are available in the organization and, for future reference, what requirements they

will have to fulfill to achieve the promotion which they aspire (Risha, 2019). ShaitoFadel (2019) identified three activities for career opportunities namely career path, job analysis and succession planning.

Job Analysis: job analysis is a process to identify and determine in detail the certain job duties and requirements and the comparative importance of these duties for a given job. Job analysis is a process where results are made about data collected on a job. “The Job; not the person”. An imperative notion of job analysis is that the analysis is conducted of the job, not the person. While job analysis data may be collected from executives through interviews or questionnaires, the result of the analysis is a description or specifications of the job, not a description of the person (HR Guide, 2015).

Succession Planning: Business Jargons defined succession planning as “the systematic process of recognizing and creating future leaders who are able to take the position of the old ones when they leave the organization due to retirement, resignation, termination, transfer, promotion or death (Business Jargons, 2019).

Career planning is an important HRM practice of identifying employees’ career preferences and setting up a development objective by establishing an action plan that enable employees to match their capabilities and interests with organizational available opportunities (Ismail, Adnan, & Bakar, 2014). Gardner et al. (2011), observed that individuals (employees) mostly prefer to join the organization that provides enough opportunities to attain their career goals and fully displayed their potential.

2.3.4 Performance Appraisal

Armstrong (2010) describes the role of the performance appraisal as a tool for looking forward to what need to be done by people in the organization in order to achieve the purpose of the job to meet new challenges. Once tasks are assigned to employees in the organization, the management of the organization is supposed to make sure that the tasks are performed as planned accordingly. This could be achieved through performance appraisal.

Gardner (2008) describes performance appraisal as the evaluation of an individual’s work with the main aim of arriving at objective personnel decisions. It is also considered as the process of

obtaining, analyzing as well as recording information that revolves about the relative worth of the employee to the organization (Armstrong, 2009).

2.3.5 Compensation

Compensation refers to all forms of pay or rewards going to employee and arising from their employment (Dessler, 2008). Compensation management is one of the big and strong features that organizations use to attract and retain its most valuable and worthy assets. It includes financial and non-financial rewards. Direct compensation (financial) is in the form of wages, salaries, incentives, bonuses, commissions and so on. Indirect compensation is the form of non-financial benefits like vacation, annual leave entitlement, medical and hospitalization benefits, and employer retirement contribution and etc.

According to Khan, Aslam & Lodhi, (2011) today's employees not only require money to fulfill their basic needs but they also necessitate various non-financial rewards and benefits often known as the "Fringe Benefits". These include bonus, retirement benefits, gratuity, educational, medical facilities including family and etc).

Compensation practices are the procedures and policies that organizations use to pay the workers proportionately based on the performance and terms of contract (Sothy, 2019). When the organization provides better compensation practices, the employees will be encouraged to perform their tasks better; thus contributing to the overall improvement in organization performance (Samnani& Singh, 2014).

Organizations use various methods such as job security, promotion, rewards, and salary to increase the employees' performance (Mariani et al., 2019; Hassan & Mahmood, 2016). According to Pradhan and Jena (2016), employee performance is the output of the exchange with the compensation strategies such as rewards offered by the employer. The relationship between compensation practices and workers' performance is a widely researched area.

2.4. Empirical Literature

Ana *et al.* (2019) verified a positive, strong relationship between HRM practices and employee satisfaction as the result organizational performance can be improved. Effective HRM practices can increase employee satisfaction and commitment on one the hand and organizational performance on the other hand (Cai *et al.*, 2019).

Abebe, Mesele, & Lemessa (2015) conducted on the impact of training and development on employee performance and effectiveness. The beta (β) coefficient from the general linear models, unadjusted score for training and development with 95% Confidence Interval (CI) was β 0.46 (0.28, 0.63) while employee performance with 95% CI was β 0.49 (0.39, 0.60). And in the adjusted models the β value for training and development was 0.25 (0.11, 0.39), while employee performance scored 0.42 (0.32, 0.53). The relationship was found statistically significant at $p < 0.05$. It revealed, in training and development activities in which employees had participated brings new potentials of employees in performing task and resulted in employee effectiveness.

Mohamud (2014) conducted a study on conducted impact of training on the performance of staff. The study found that training had significant contribution on enhancing performance of the staff and reducing various HR issues. Janet (2019) studied on the effect of hiring practices on employee performance. The study found that effective hiring practices leads to improved employee practices performance of the staff. Moraa and Datche (2019) conducted on the impact of performance appraisal on performance of employees. The study reveals that positive association between performance appraisals on performance of employees.

Similarly study conducted by Monday (2012) indicated in his study that testing the effect of performance appraisal practices on employee performance, the t-test yields 3.524 and the probability value (p-value) of the relationship between performance appraisal and employee performance is 0.000. Because the t-test is positive and the p-value is 0.000, lower than the level of significance (5%), it found that performance appraisal practices have a positive effect on employee's performance in the study area.

According to a recent employment survey, lack of career opportunity is the primary reason employees say they leave an organization, whereas 5 years ago, unsatisfactory pay was the leading reason people quit (CEB, 2015). In fact, about 70 percent of those surveyed said they were dissatisfied with growth opportunities at their companies in the study area.

The study of Khalid et al. (2014) provided empirical evidence on the positive relationship between career planning and employee performance and argued that the career planning practice provided by organizations inspires the individual employees in the organization to excel in performance. Kadir et al. (2019) studied the relationship between compensation practices and staff

performance. The study found that compensation practices is directly associated with lecturers' performance in the study area.

Onyekwelu et. al, (2020), established a survey among Nigeria banks that compensation practices led to the motivation of workers leading to increased productivity. The researchers interviewed 80 lecturers of XYZ College to test the relationship between the compensation practices used by the university and lecturers' performance. They concluded that the compensation practices were directly associated with lecturers' performance.

Marwat, Qureshi and Ramay, (2015) conducted the study on impact of HRM Practices on employee performance, using training, compensation, performance appraisal, job definition and employee participation on perceived employee performance, it was discovered that all the tested variables were positively correlated but correlation of compensation (0.67) and training (0.66) were highest respectively.

Singh and Biniam (2016) investigated the impact of human resource management practice on organizational performance. The study has found that human resource practices: recruitment and selection, training and development, performance appraisal and compensation have a significant relationship with university performance.

Njue and Kiiru (2018) examined Human resource management practices and performance of manufacturing companies. The study used compensation, information sharing and training & development as an independent variable and it found that there was significant positive relationship between HRM practice and organizational performance.

Mufeed and Gulzar(2015), studied the impact of human resource management practices on organizational performance. The study used 80 samples. It explored contribution of HRM practices including general climate, organizational culture, selection, job definition, career planning, employee participation, performance appraisal system, training and compensation on perceived organizational performance. It was found that HRM practices have significant association with organizational performance.

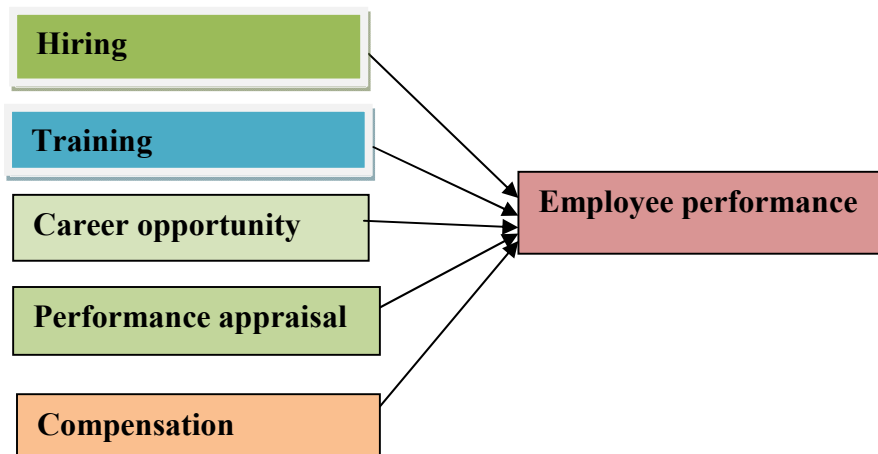

2.5. Conceptual Framework

This conceptual framework consists of five HRM practices namely hiring, training, career opportunity, performance appraisal and compensation as independent variables and employee performance as dependent variable.

CHAPTER THREE

RESEARCH METHODOLOGY

3.1 Description of Study Area

EnoreEnere and Meger Woredais one of woreda in GurageZone. It was established in 2018 G.C. The woreda contains 27 public sectors and the woreda's capital town Mike, it is located on the main road from Addis Ababa to Kosse town just 220 km apart from Addis Ababa. Regarding to the climate of the woreda it has two different Agroclimatic conditions, high land (DEGA) and Temperate (Weyna-Dega) and consisting 20% and 80% respectively. The average temperature ranges from 14-27C⁰ and the average annual rainfall ranges from 790-1820mm. About 99% of the population engaged in agriculture (Woredas report of 2014 E.C). The sectors were selected for the study includes all 27 public sectors located in the woreda.

3.2 Research Approach

The use of both qualitative and quantitative approach helps to eliminate the weakness of one approach by being complimented by another approach (Fuller, et.al, 2015; Gibson, 2017). Under this study the researcher used mixed method which combines both quantitative and qualitative data. In this mixed method the presentation of the results can be convincing and powerful (Catherine, 2002). This approach used in the different phases of the research to obtain a variety of information on the same issue and to obtain a higher degree of validity and reliability through deeper analysis. Hence, the researcher motive for using mixed approach is that both quantitative and qualitative research which provides an in-depth look at context, processes, interactions and precise measurement of attitudes and outcomes and also a better understanding of the research problem, than just utilizing one approach alone.

3.3 Research Design

Research design is blue print for empirical research aimed at answering specific research question or testing specific hypotheses (Bhattacharjee, 2012). According to Kothari (2014) descriptive research describes and interprets what the information is as it is. It looks at individuals, groups, institutions, methods and material in order to describe, compare, contrast, classify analyze and interpret the entity and events that constitute varies field of inquiry. It aims to describe the estate of affairs as it exists. Whereas explanatory research aiming at establishing the cause-and-effect relationship between variable. According to Neuman, (2014) explanatory research helps to

explain, understand and predict the cause-and-effect relationship between the variables. This study used a combination of both descriptive and explanatory research design. Since the nature of this research is a cause-and-effect relationship explanatory research design is the most appropriate design to examine briefly the effect of HRM practice on employee performance in the study area. In addition to this, in order to describe background information of respondents and implementation of the selected HRM practices in the study area the study used descriptive research design.

3.4. Target Population, Sample Size and Sampling Techniques

3.4.1 Target Population

Target population consists of all members of a real or hypothetical set of people, events or objects from which a researcher wishes to generalize the results of their research while accessible population consists of all the individuals who realistically could be included in the sample (Kothari & Garg, 2018). The populations of the study were the entire (27) Offices of Enore Enere and Meger Woreda in Gurage Zone which include permanent employees and leaders of the sectors which is 1302 in number. Among these, the numbers of males are 807 and females are 495.

3.4.2 Sampling Technique

According to Sekaran, (2003) sampling techniques involve the methods or ways in which the researcher attains or to selects an optimal sample size from the study population. This study used both a probability and non-probability sampling technique, since the target population of the study has selected permanent employees and leaders of Enore Enere and Meger Woreda public sectors in Gurage Zone. The sampling technique used in this study were two stage sampling including stratified and random sampling techniques which is the process of stratification followed by random selection of subjects from each stratum. The stratified sample has been chosen because the sample data is divided into different strata from the woreda's different categories (sectors) are needed (Sekaran and Bougie, 2013). As it is mentioned in Kothari (2013) stratified sampling result in more reliable and detailed information and enable to get more representative sample. Therefore, stratified random sampling was applied for this study to be able to carefully assess and analyze the chosen respondents' opinion (response) of each sector. Then, permanent employees of the sectors were randomly selected from each stratum by using simple random sampling technique.

In addition, purposive sampling technique was used in the study because purposive sampling enables the researcher to sample on the basis of his/her judgment (Schwandt, 1997). In this study the researcher used purposive sampling in order to choose study public sectors and get primary respondents according to their roles and enable the researcher to solicit relevant data. Through the use of purposive sampling, leaders of the sectors were selected for interview.

3.4.3 Sample size

Sample size is the actual number of subjects or a subset of the population chosen as a representative sample of the target population in a given study. It is a basic unit within a population that can be used to represent the whole population. It is unfeasible to study the whole target population and therefore the researcher used sample population. The sample size was determined by a three based criterion, this being level of precision, the level of confidence, and finally the degree of variability in the attributes being measured (Cooper & Schindler, 2014).

Based on the formula identified, the sample size estimated was 306 as shown below.

$$n = \frac{N}{1 + Ne^2}$$

Where: n= the size of the sample

N= the size of the population

e = is the error term, which is 5% (i.e., at 95% confidence level

$$\begin{aligned} n &= 1302 / (1 + 1302(0.05)^2) \\ &= 1302 / (1 + 1302(0.0025)) = 1302 / 4.255 \end{aligned}$$

Accordingly, n= **306** sample respondents

Since the number of people in each sector is not the same, the number of samples for each sector will be calculated by the following formula:

$$ni = \frac{n * Ni}{N}$$

Where n= total number of samples

N= total number of populations

Ni= total number of populations in each sector ni = number of samples in each sector

Table 3.1 Number of Employees and Proportion of Samples from Each Sector

S/N o	Sector department	Ni	No of sample in each dept. $n_i = n \cdot N_i / N$
1	Public service	37	$306 \cdot 37 / 1302 = 9$
2	Agriculture	155	$306 \cdot 155 / 1302 = 36$
3	Health	121	$306 \cdot 121 / 1302 = 28$
4	Enterprise	25	$306 \cdot 25 / 1302 = 6$
5	Union	14	$306 \cdot 14 / 1302 = 3$
6	City ev't& construction	42	$306 \cdot 42 / 1302 = 10$
7	Education	658	$306 \cdot 658 / 1302 = 155$
8	W/House of people representative	13	$306 \cdot 13 / 1302 = 3$
9	Youth and Sport	11	$306 \cdot 11 / 1302 = 2$
10	Trade & market dev't	12	$306 \cdot 12 / 1302 = 3$
11	Plan	8	$306 \cdot 8 / 1302 = 2$
12	Servant & Social ass. Agency	7	$306 \cdot 7 / 1302 = 2$
13	Environment and forest protection	15	$306 \cdot 15 / 1302 = 4$
14	Court	14	$306 \cdot 14 / 1302 = 3$
15	Milisha	4	$306 \cdot 4 / 1302 = 1$
16	Peace & security	7	$306 \cdot 7 / 1302 = 2$
17	Justice	16	$306 \cdot 16 / 1302 = 4$
18	Communication	6	$306 \cdot 6 / 1302 = 1$
19	Finance	19	$306 \cdot 19 / 1302 = 4$
20	Police	16	$306 \cdot 16 / 1302 = 4$
21	Revenue	16	$306 \cdot 16 / 1302 = 4$
22	Water, mineral and energy	19	$306 \cdot 19 / 1302 = 4$
23	Administration	21	$306 \cdot 21 / 1302 = 5$
24	Science and IT	8	$306 \cdot 8 / 1302 = 2$
25	Road	19	$306 \cdot 19 / 1302 = 4$
26	Culture and tourism	8	$306 \cdot 8 / 1302 = 2$
27	Women and children department	11	$306 \cdot 11 / 1302 = 3$
Total		1302	306

3.5 Data Type and Sources

3.5.1 Type of Data

The study used both quantitative and qualitative data. In order to present a broad range of information, both primary and secondary data were used.

3.5.2 Source of Data

Primary data were obtained through structured questionnaires from employees of the study sector and personal interview from seven leaders of the sectors. Secondary data were sourced from journals, books, and reports of the woreda administration which is related to study variables.

3.6 Data Collection Instruments

To obtain valid and reliable data for the study, various methods of triangulation approaches was used. Under this study, various data gathering instruments; questionnaire and interview were applied.

3.6.1 Questionnaire

A questionnaire consists of a number of questions which are typed or printed on forms in a definite order (Saranta Kos, 2005). According to Kothari (2004), structured questionnaires are simple to administer and relatively inexpensive to analyze. The researcher used structured questionnaire to collect data. The structured questionnaire was chosen, because it ensures the confidentiality of responses and save time, questionnaires have advantages over some other types of surveys because they are cheap, do not require as much effort from the researcher as verbal or telephone surveys, and often have standardized answers that make it simple to compile the questions (Walliam, 2006). The questionnaire includes three parts; the first part regards the demographic characteristics of respondents, the second part; selected HRM practice and the third part employee performance related questions. Each five independent variables and the dependent variable were consisted six questions and total of 33 close-ended questions was included for survey. Close ended questions are selected because they help the researcher to know the respondent's perception, and help the respondents to choose one option from the given scales that best aligns with their views. Data were systematically categorized in order to easily understand and express their feelings 5- point Linkert scale namely (1) Strongly Disagree, (2) Disagree, (3) Neutral, (4) Agree and (5) Strongly Agree was used to understand respondent's degree of agreement with each statement.

3.6.2 Interview

In this method six questions were asked and conversation between the researcher and the key respondents (seven leaders of selected sectors) was done. Therefore, this method allowed face-to face conversation and hence it used to control ambiguities between interviewer (researcher) and interviewee. In this study semi-structured interview was used to collect data from sectors selected leaders.

3.7 Reliability and Validity

According to Bryman, (1988) reliability is defined as consistency of measurement or stability of measurement over a variety of conditions in which basically the same results should be obtained. Cronbach's alpha coefficient is the most popular and commonly used technique to estimate reliability or internal consistency of assessments and questionnaires in the behavioral sciences coefficients. A pre-testing of the questionnaires was done by using 10% of sample population in study public sectors employees, since they are not part of the scope of the study. Then, the final questionnaire was pre-tested to a sample of 31 employees which was selected from the sectors. Consequently, ambiguous questions were revised based on the feedbacks obtained from the pilot survey. There are different methods of reliability test, for this study Cronbach's alpha was considered. For testing the reliability of the data instrument Cronbach's Alpha (α) was employed. According to a general rule, internal consistency is said to be acceptable when $0.8 > \alpha \geq 0.7$, the reliability is said to be good when $0.9 > \alpha \geq 0.8$, Further, $\alpha \geq 0.9$ show excellent internal consistency among the items (Cheema and Abbas, 2017). The result is presented as follows:

Table 3.2 Reliability Test

Study variables	Number of items	Cronbach's Alpha value	Result
Hiring	5	0.882	Good
Training	6	0.858	Good
Career opportunity	5	0.850	Good
Performance appraisal	5	0.889	Good
Compensation	6	0.878	Good
Employee performance	6	0.893	Good
Overall reliability	33	0.957	V.good

Source: Pilot test, 2023

As revealed in Table 3.2, the results of Cronbach's alpha reliability test of all study variables showed that all the values were above 0.80 showing that the instrument was reliable. Thus, all explanatory variables and performance are reliable and acceptable in the range of Cronbach's Alpha Coefficient. Based on the examination of the research scales and constructs, it can be concluded that each variable represents a reliable construct.

Validity means that we are measuring what we want to measure. There are different types of validity measurements including, face validity and content validity (Bryman, 1988). Validity test was assured when the questionnaire was prepared based on extensive reading of literature review.

Undertaken preparing the questionnaire with a guidance of the advisor and information from different sources the study tried to avoid the ambiguous or vague wordings to ensure that respondents were read and answer the question consistently on different occasions in the same context.

3.8 Method of Data Presentation and Analysis

Several statistical tools used for data analysis, in order to make the analysis suitable for effective decision-making (Sreejesh, 2014). The statistical Package for Social Sciences (SPSS) version-25 was used to analyze data for descriptive and inferential statistics. Descriptive data were analyzed for frequencies, percentages and, meanwhile inferential statistics was analyzed for correlations and regressions. In this study, correlation and multiple linear regression analysis was applied to explain the relationship and the effect of each independent variable on the dependent variable respectively.

Regression is a technique that can be used to investigate the effect of one or more predictor variables on an outcome variable. Regression allows you to make statements about how is one or more independent variables is predicting the value of a dependent variable.

3.8.1 Model specification

According to Gujarati, (2001) to analyze the relationship between dependent and independent variables the following multiple linear regression model was applied

$$Y_{it} = \beta_0 + \sum \beta X_{it} + \epsilon_{it}$$

Where:

Y_{it} represents the dependent variables for time period t.

β₀ is the intercept.

β_K represents the coefficients of the X_{it} variables

X_{it}, represents the explanatory variables for time period t.

ε_{it} is the error term.

Based on the above general empirical research and other similar researches this study was adopted the following equation to investigate the effect of HRM practice on employee performance in the study area.

$$Y = \beta_0 + \beta_1 X_1 + \beta_2 X_2 + \beta_3 X_3 + \beta_4 X_4 + \beta_5 X_5 + \epsilon$$

Where:

Y = Dependent variable (Employee performance)

β₀ = Constant term

β₁ = Coefficient of hiring (x₁)

β₂ = Coefficient of training (x₂)

β_3 = Coefficient of career opportunity (x_3)
 β_4 = Coefficient of performance appraisal (x_4).
 B_5 = Coefficient of compensation (x_5).
 ε = error term

In addition, the data gathered from interview were analyzed in narrative way.

3.11 Ethical Consideration

According to Kumar (2005) ethical issues concerning research subjects are mainly privacy, anonymity, voluntary and informed consent. The privacy of information was obtained from the research respondents as well as the anonymity of the research subjects was respected. The participants were participated voluntarily and at no one time they coerced. The anonymity of the respondents was adhered to as no personal information, such as names. In the study the researcher-maintained objectivity, and professional standards through scientific process and no falsification, alteration or misrepresentation of data for biased or other purposes. Finally, all reference materials for this study acknowledged with appropriate citation.

CHAPTRE FOUR

RESULT AND DISCUSSION

The purpose of this study was to investigate the effects of human resource management practices on employee’s performance the case of EnoreEnere and MegerWoreda public sectors in Gurage Zone. To explore this, the researcher followed various steps such as data collection, coding, feeding the data in to SPSS V-25, analyzing using different statistical approaches such as descriptive statistics, correlation analysis and multiple regression analysis to test the significances and measure the effect of each independent variables on the dependent variable. The primary data was collected through questionnaire from the current employees in each sector. In this chapter response rate, demographic background of respondents, results of descriptive and inferential analysis, and discussion of results are presented as follows:

4.1 Response Rate

Kimmel (2009) noted that response rate is the total percentage of people who respond to a survey. As indicated in table 4.1, out of 306 questionnaires distributed, 292 were correctly filled & returned. This constitutes a response rate of 95.4 percent, which is more than a half of targeted sample. The researcher found this proportion to be adequate for data analysis and for the purpose of the interpretations of the findings. Cooper and Schindler (2011) noted that the return rates of above 50% are acceptable to analyze and publish, 60% is good, 70% is very good while above 80% is excellent. Based on this assumption, the response rate in this study was considered to be excellent for the study. The response rate was shown in table 4.1 below.

Table 4.1: Response Rate

Respondents	Questionnaires administered	Questionnaires correctly filled and returned	Response rate
Employee respondents	306	292	95.4%

Source: Own survey, 2023

4.2 Demographic Characteristics of Respondents

In this study the respondents’ profile was organized in terms of gender, age level, educational qualification, and service years. The result of demographic characteristics of respondents is summarized and presented in Table 4.2.

Table 4.2 Background of Respondents

Item	Description	Frequency	Percent
Sex of respondents	Male	162	55.5
	Female	130	44.5
	Total	292	100.0
Age of respondents	20-30	53	18.3
	31-40	155	53.2
	41-50	75	25.7
	51-60	3	.9
	above 60	6	1.8
	Total	292	100.0
Educational qualification	Primary	3	.9
	Secondary	5	1.8
	Certificate	8	2.8
	Diploma/TVT	78	26.6
	Degree	178	61.0
	Master	20	6.9
	Total	292	100.0
Monthly salary in ETB	1000-2500	15	5.0
	2501-4000	32	11.1
	4001-5500	40	13.6
	5501-7000	45	15.4
	7001-8500	53	18.3
	8501-10000	28	9.6
	10001-11500	41	14.0
	above 11500	38	13.0
	Total	292	100.0
Work experience in public sector	below 2 years	29	10.0
	2-5 years	102	34.9
	6-9 years	136	46.6
	10-15 years	22	7.6
	above 15 years	3	1.0
	Total	292	100.0

Source: *Own survey, 2023*

The results presented in Table 4.2 revealed that majority, 55.5% of the respondents were male, while 44.5% were female. The dominance of the male respondents was attributed to the fact that public sector of the study woreda recruitment more men in technical jobs compared to the women.

Furthermore, majority (53.2 %) of the respondents were within the age group of 31-40years, followed by 25.7% who were within the age group of 41-50 years, while the respondents within the age group of 20-30 years represented by 18.3%.The remaining 0.9% and 1.8% of respondents were in age group of 51-60 and above 60 years respectively. The dominance of the respondents within the age group of 31-40 years implies that they are youngster enough to work hard and work for the company which would imply seeking for better means of improving sales performance.

Concerning to educational qualification, the result revealed that majority (61%) of the respondents were Bachelor Degree holders, followed by 26.6% who were Diploma holders and 6.9% who were Master holders. The remaining 2.8%, 1.8% and 0.9% respondents were certificate, high school and primary education completers. The dominance of the respondents with the Bachelor Degree signifies that the public sectors prefer to employ educated employees who understand the importance of HRMP for their performance.

Coming to monthly salary, large proportion (18.3%) of respondents have monthly income of 7,001-8,500 ETB, 15.4% respondents have monthly income of 5501-7000ETB and 14.0% respondents have monthly income of 10,001-11500 ETB, and. Also, 13.6% are having monthly income of above 11, 500 ETB. Furthermore, 29.7% of respondents have monthly income of below 5500 ETB. This implies that most of respondents' current salary was not considered current economic situation of the country. This influences commitment of employees on their job

Regarding to work experience, majority (46.6%) of the respondents had 6-9 years of working experience, 34.9% of them had 2-5 years of experience while 7.6 % had 10-15 years of working experience and the remaining 10% and 1% respondents below 2 years and above 15 years of work experience respectively. The dominance of the respondents with the working experience of above 5 years implies that the public sector prefers to recruit and retain employees with high level of experience in the sector for purposes of competitive advantage.

4.3 Descriptive Analysis of study variables

This section presents level of implementation of five HRM practices namely hiring, training, career opportunity, performance appraisal and compensation in EnoreEnere and Meger Woreda public sectors. According to Alsayyad*et.al* (2006), the mean range values are interpreted as the mean score 1- 1.8 is considered as very low, the mean score from 1.81-2.6 is considered as low,

the mean score 2.61-3.4 is considered as average/moderate/, the mean score 3.41- 4.2 considered as high and the mean score 4.21-5.00 considered as very high as illustrated by comparison bases of mean of score of five-point Likert-scale instrument. This mean ranges shows that the lower the mean, the more the respondents disagree with the items and the higher the mean, the more the respondents agree with the items. Hence, the researcher used these mean range values for rule of thumb in order to interpret responses of independent and dependent variables. Accordingly, the detail of the result is presented as follows:

4.3.1 Hiring Practice

This section focuses on the description of the independent variable hiring based on five items. These five attributes of hiring opportunity are prepared based on reviewing previous published journals .The data is summarized and presented in Table 4.3.

Table 4.3 Hiring Practice in the Selected Public Sectors

Items	Agreement level in percent					N	Mean	Std. Dev.
	SD	DA	N	A	SA			
The hiring decisions in Enore Enere and Meger Woreda Public service are determined by the candidates' ability to undertake the technical aspect of the job requirements	5.8	38.0	19.9	28.4	7.9	292	2.94	1.101
Public service is able to attract suitable applicants to fill its vacancies	5.1	40.4	15.4	32.2	6.8	292	2.95	1.098
Recruitment and selection process in public service is clear and transparent	6.8	34.9	15.8	39.4	3.1	292	2.97	1.069
The sectors employs are the most qualified candidates	9.2	24.7	28.1	27.4	10.6	292	3.05	1.147
The sector has formal orientation and familiarization process designed to help new recruits understand the organization	12.0	25.3	18.5	36.0	8.2	292	3.03	1.193
Total percentage and aggregate mean	7.78	25.82	19.54	32.68	7.32	292	2.99	1.122

Source: Own survey, 2023

From Table 4.3, the aggregate mean of all five items of hiring in the study area indicate 2.99 with standard deviation 1.122, which lies between the mean range of 2.61-3.4 and it falls in the moderate mean section. This implies that (25.82%) of the respondents disagreed and 7.78% of them strongly disagreed with items of hiring, while 32.68 % of the respondents agreed and 7.32% of them strongly agreed with these items. The remaining 19.54% were neutral. This finding showed that the hiring decisions in Enore Enere and Meger Woreda public service is not

fully determined by the candidates' ability to undertake the technical aspect of the job requirements and it lacks to able to attract suitable applicants to fill its vacancies according to views of respondents. On the other hand, number of respondents (39.4% and 36%) respectively believed that recruitment and selection process in the study woreda public service is clear and transparent, and the sectors have formal orientation and familiarization process designed to help new recruits understand the organization. However, still numbers of respondents (28.1%) are unclear on weathered the sectors employs are the most qualified candidates or not.

Similarly, response from key informants' (leaders of the study sectors) interview revealed this fact. Firstly the researcher asked the leaders that how their organizations hire employees?

Most of them responded that *“recruitment and selection process in their woreda public service is clear and transparent, formal orientation is given by woreda public service and each sector about their job and rules & regulations of public servants to help new recruits understand the organization. On the other hand, public service not widely used technological vacancy announcement to attract suitable applicants to fill its vacancies”*.

4.3.2 Training Practice

This section focuses on the description of the independent variable training based on six items. These six attributes of training practice are prepared based on reviewing previous published journals. The data is summarized and presented in Table 4.4.

Table 4.4: Training Practice in the Selected Public Sectors

Items	Agreement level in percent					N	Mean	Std. Dev.
	SD	DA	N	A	SA			
In my sector training needs are identified through a formal performance appraisal mechanism	3.8	36.6	25.4	27.4	6.5	292	2.96	1.026
In my sector training programs are designed and developed based on the analysis of employee's skill, knowledge and attitude gaps	5.8	41.1	20.5	28.1	4.5	292	2.84	1.040
My sector provide extensive training programs for employees in all aspects	5.5	40.8	29.8	20.2	3.8	292	2.76	.96185
In my sector employee training is used to improve staff technical performance	6.5	30.8	21.9	32.2	8.6	292	3.05	1.110
My sector evaluates effectiveness of training after training program	8.2	32.9	24.7	25.0	9.2	292	2.94	1.131
I feel better equipped to tackle unexpected events with skill and confidence	5.8	25	20.5	34.9	13.7	292	3.25	1.148
Total percentage and aggregate mean	5.93	34.53	23.8	27.97	7.72	292	2.97	1.069

Source: Own survey, 2023

From Table 4.4, the aggregate mean of all items of training in the study area indicate 2.97 with standard deviation 1.069, which lies between the mean range of 2.61-3.4 and it falls in the moderate mean section. This implies that large proportion (34.53%) of the respondents disagreed and 5.93% of them strongly disagreed with items of training, while 27.79 % of the respondents agreed and 7.72% of them strongly agreed with these items. The remaining 23.8% were neutral. This finding showed that organizations training needs are not properly identified through a formal performance appraisal mechanism, training programs are not designed and developed based on the analysis of employee's skill, knowledge and attitude gaps, the study sectors lack to provide extensive training programs for employees in all aspects and most sectors do not evaluate effectiveness of training after training program. However, a number of respondents (32.2% and 34.9%) respectively believed that when organizations train their employees, it used to improve staff technical performance and they feel better equipped to tackle unexpected events with skill and confidence when they participate in training program. Similarly, response from key informants' (leaders of the study sectors) interview revealed this fact. Regarding to training practice the researcher interview that "does your organization provide adequate training for its employees? If yes or no how/why?"

Out of the seven leaders six of them said no, due to lack of budget they did not provide adequate short term trainings. Furthermore most of leaders said that "*in most public sectors in the Woreda organizations employees training needs are not properly identified, training programs are not designed and developed based on the analysis of employee's skill, knowledge and attitude gaps and most sectors lack to provide short term training programs for employees in all aspects due to shortage of budget and lack of commitment of sector leaders*". This indicates that the study sectors did not provide adequate training for employees. However, without giving proper short and long term trainings it is difficult to achieve organizational goals.

4.3.3 Career Opportunity Practice

This section focuses on the description of the independent variable career opportunity based on five items. These five attributes of career opportunity are prepared based on reviewing previous published journals. The data is summarized and presented in Table 4.5.

Table 4.5: Career opportunity Practice in the Selected Public Sectors

Items	Agreement level in percent					N	Mean	Std. Dev.
	SD	DA	N	A	SA			
Leader identifies career path for employees in my organization	3.4	30.5	18.8	36.0	11.3	292	3.21	1.101
I received information regarding job postings that are available in the organization to aspire me	5.5	25.8	20.9	36.0	7.9	292	3.11	1.088
My organization use career paths through the most junior position and end with the most senior position	3.8	33.2	19.9	28.4	14.7	292	3.17	1.153
I have given written job description from my leader /director/	4.1	34.2	20.9	33.2	7.5	292	3.06	1.068
My organization designed favorable systems that provide opportunities for me to develop and improve my skills, knowledge and new technologies	4.8	25.0	22.9	38.0	9.2	292	3.22	1.071
Total percentage and aggregate mean	4.32	29.74	20.68	34.32	10.12	292	3.15	1.096

Source: Own survey, 2023

From Table 4.5, the aggregate mean of all items of career opportunity in the study area indicate 3.15 with standard deviation 1.096, which lies between the mean range of 2.61-3.4 and it falls in the moderate mean section. This implies that large proportion (34.34%) of the respondents agreed and 10.12% of them strongly agreed with items of career opportunity, while 29.74% of the respondents disagreed and 4.32% of them strongly disagreed with these items. The remaining 20.68% were neutral. This finding showed that a number (36%) of leaders of most sectors identified career path for employees, number of respondents (36%) received information regarding job postings that are available in their organization to aspire them, and most study sectors (38%) have designed system that provide opportunities for them to develop and improve their skills, knowledge and new technologies, but the systems are not fully functional according to views of respondents. On the other hand, a number of public sectors (33.2%) in the woreda did not properly use career paths through the most junior position and end with the most senior position and a number of sectors (34.2%) did not give written job description for their employees.

Similarly, response from key informants’ (leaders of the study sectors) interview revealed this fact. Concerning to trends of career opportunities of workers in the study area the key informants asked that what kinds of career opportunities are designed for employees in their organization. Most of them responded that “*the career opportunities in most public sectors in the Woreda administration was not attractive, because most organizations did not give written job description for their employees, most of them did not properly apply employees career structure accordance JEG manual due to shortage of budget and unclear response of implementation of career structure from SNNPRS regional offices*”. All these results indicated that the career opportunities of workers was unsatisfactory. This hinders employees motivation and committeemen.

4.3.4 Performance Appraisal Practice

This section focuses on the description of the independent variable performance appraisal based on five items. These five attributes of performance appraisal are prepared based on reviewing previous published journals. The data is summarized and presented in Table 4.6.

Table 4.6: Performance Appraisal Practice in the Selected Public Sectors

Items	Agreement level in percent					N	Mean	Std. Dev.
	SD	DA	N	A	SA			
In my sector there is a formal and written performance appraisal system	3.8	27.4	23.6	36.3	8.9	292	3.19	1.054
The objectives of the performance appraisal system are clear to me	6.2	25.0	21.9	39.0	7.9	292	3.17	1.084
Performance evaluation criteria and standards of my organization are based on job description	4.1	32.5	20.9	32.9	9.6	292	3.11	1.092
I openly discuss the performance appraisal result with appraiser and provide performance-based feedback and counseling	6.2	25.3	22.3	37.0	9.2	292	3.18	1.100
Corrective measures have taken when the result of performance appraisal is under the expected standard	3.1	37.3	19.5	36.3	3.8	292	3.02	1.006
Total percentage and aggregate mean	4.68	29.5	21.64	36.3	7.88	292	3.13	1.067

Source: Own survey, 2023

From Table 4.6, the aggregate mean of all items of performance appraisal in the study area indicate 3.13 with standard deviation 1.067, which lies between the mean range of 2.61-3.4 and it falls in the moderate mean section. This implies that large proportion (36.3%) of the respondents

agreed and 7.88% of them strongly agreed with items of performance appraisal, while 29.5% of the respondents disagreed and 4.68% of them strongly disagreed with these items. The remaining 21.64% were neutral. This finding showed that in most (36.3%, 39%, and 32.9%,) respectively sectors there was a formal and written performance appraisal system, the objectives of the performance appraisal system are clear to employees, performance evaluation criteria and standards of their sector are based on job, and most of respondents (37%) openly discuss the performance appraisal result with appraiser and provide performance-based feedback and counseling. However, a corrective measure has not properly taken when the result of performance appraisal is under the expected standard according to views of respondents which is represented by (37.3%) of respondents. Similarly, response from key informants' (leaders of the study sectors) interview revealed this fact that most of leaders responded that their organization openly discuss the performance appraisal result with appraiser and provide performance-based feedback and counseling. But it does not consistently take corrective actions based on performance appraisal policy of public sector.

4.3.5 Compensation Practice

This section focuses on the description of the independent variable compensation based on six items. These five attributes of compensation are prepared based on reviewing previous published journals. The data is summarized and presented in Table 4.7.

Table 4.7 Compensation Practice in the Selected Public Sectors

Items	Agreement level in percent					N	Mean	Std. Dev.
	SD	DA	N	A	SA			
My sector provides a competitive compensation and benefits package when compared to other organizations of public sectors	3.8	25.3	21.2	38.4	11.3	292	3.28	1.079
My pay is appropriate when it is compared with that of other workers with similar duties/responsibilities within the organizations	5.5	31.5	13.7	38.7	10.6	292	3.17	1.148
Sometimes my sector compensates me for extra duties and responsibilities	4.5	22.6	19.9	38.7	14.4	292	3.36	1.114
My sector recognize and reward employees appropriately based on individual performance in the year	3.4	31.5	17.1	27.7	20.2	292	3.29	1.205
I feel my sector compensates me fairly for the work I do	5.5	36.6	16.4	31.5	9.9	292	3.14	1.132
I am satisfied with the amount of reward and benefits I receive	4.8	38.0	14.4	32.9	9.9	292	3.15	1.130
Total percentage and aggregate mean	4.58	30.92	17.12	34.65	12.72	292	3.23	1.135

Source: Own survey, 2023

From Table 4.7, the aggregate mean of all items of compensation in the study area indicate 3.23 with standard deviation 1.135, which lies between the mean range of 2.61-3.4 and it falls in the moderate mean section. This implies that large proportion (34.65%) of the respondents agreed and 12.72% of them strongly agreed with items of compensation, whereas still a number of employees (30.92%) of the respondents disagreed and 4.58% of them strongly disagreed with these items. The remaining 17.12% was neutral. This finding showed that a number of respondents (38.4%) believed that the sector provide a competitive compensation and benefits package when compared to other organizations of public sectors, their pay is appropriate when it is compared with that of other workers with similar duties/responsibilities within the organizations and Sometimes their sector compensate them for extra duties and responsibilities. This result implied that public sectors applied JEG salary payment structure and few sectors like health sector compensate for extra duties and responsibilities. On the other hand, most sectors in the study Woreda did not recognize and reward employees based on individual performance in the year, most employees (36.6%) feel their sector did not compensate them fairly for the work they do and most respondents (38%) are dissatisfied with the amount of reward and benefits they received. Similarly, response from key informants' (leaders of the study sectors) interview revealed this fact. Relating to reward management the key informants interviewed that do you think that compensation packages of your organization satisfied its employees? How?

Most of them responded no. Also they explained that *“their organization used JEG payment structure (job grade and determined salary). However, all sectors did not compensate employees fairly for the work they do and the current public servants salary scale was not competitive with other private sectors salary scale and not competitive with current economic situation of the woreda in particular and the country in general. Furthermore, they said most sectors did not recognized their top performer employees accordance with public service & human development office recognition application manual due to lack of budget & lack of concentration of political leaders (decision makers) in the woreda”*. This indicates that reward management practice of the study area needs improvements.

4.3.6 Employee's Performance in the Study Woreda

This section focuses on the description of the dependent variable employee performance based on six items. These six items are prepared based on reviewing previous published journals which are related to study predictors of HRM practice. The data is summarized and presented in Table 4.8.

Table 4.8 Employee Performance in the Selected Public Sectors

Items	Agreement level in percent					N	Mean	Std. Dev.
	SD	DA	N	A	SA			
I complete my job accurately and timely to achieve the work objective	3.1	24.3	24.7	40.8	7.2	292	3.25	1.002
I establish my job objectives with regard to the department and organization goals	2.1	29.8	19.9	40.4	7.5	292	3.21	1.029
I effectively work with other employees	1.1	28.8	13.7	42.1	14.4	292	3.400	1.081
I produce high quality work	2.4	23.6	24.3	38.0	11.6	292	3.33	1.036
I have a complete knowledge & understanding while performing my tasks	4.5	30.1	18.2	36.3	11.0	292	3.19	1.117
I perform my work to the expected standards	1.0	28.4	15.1	41.1	14.4	292	3.39	1.077
Total percentage and aggregate mean	2.37	27.5	19.32	39.78	11.02	292	3.29	1.057

Source: Own survey, 2023

From Table 4.8, the aggregate mean of all items of employee performance in the study area indicate 3.29 with standard deviation 1.057, which lies between the mean range of 2.61-3.4 and it falls in the moderate mean section. This implies that large proportion (39.78%) of the respondents agreed and 11.02% of them strongly agreed with the items, whereas 27.5% of the respondents disagreed and 2.37% of them strongly disagreed with these items. The remaining 19.32% were neutral. This finding showed that a number of respondents (40.8%, 40.4%, 42.1% and 38%) respectively believed that they complete their job accurately and timely to achieve the work objective, they establish their own job objectives with regard to the department and organization goals, they effectively work with other employees, they produce high quality work, most of them (36.3%) have a complete knowledge & understanding while performing their tasks and they (41.1%) perform their work to the expected standards according to views of respondents. Similarly, response from key informants' (leaders of the study sectors) interview revealed this fact that the researcher interviewed that the employees' performance status of their organization.

Most leaders responded that “*some employees perform their tasks well based on performance standards. But number of employees did not give proper service for their customers, delay of reports, did not produce high quality work and absenteeism and lateness on the job are problems related to employees in the study sectors*”. This indicates inadequate application of HRM practices may result in unsatisfied performance status of government workers in the study area.

4.4 Inferential Analysis

This inferential part of the study includes correlation between dependent and independent variables of the study and regression analysis part (the effect or contribution of each independent variable on the dependent variable of the study) and the detail of the results are presented as follows:

4.4.1 Correlation Analysis

According to Marczyk, Dematteo & Festinger (2005), correlation is the term used to measure the association or relationship between two or more variables, the result of correlation analysis is a correlation coefficient whose value ranges from -1 to +1. A correlation coefficient of +1 indicates that the two variables are perfectly positively related and a correlation coefficient of -1 indicates that the two variables are negatively related. While, a correlation coefficient of zero indicates that there is no relationship or association between two variables. The relationship gets stronger; the correlation gets closer to either -1 or +1. As the relationship gets weaker, the correlation gets closer to zero. Pearson correlation coefficient is an indicator used to determine the degree and the direction of correlation between two study variables; the closer the coefficients to an absolute value of 1, the higher the degree of correlation (Arkkelin, 2014). Evans (1996) recommends that the absolute value of linear correlation coefficient (r), as cited in (Beldjazia and Alatou, 2016). If $r = 0.00-0.19$ “very weak”, $r = 0.20 - 0.39$ “Weak”, $r = 0.40 - 0.59$ “Moderate”, $r = 0.60- 0.79$ “Strong” and $r = 0.8 -1.00$ “very strong”. In order to examine the relationship between HRM practices and employee performance in Enore Enere and Meger Woreda public sectors Pearson correlation coefficient was used as shown in the following table 4.9.

Table 4.9 Pearson Correlations

Study Variables		HI	TR	COP	PA	COM	EPER
HI	Pearson Correlation	1					
	Sig. (2-tailed)						
	N	292					
TR	Pearson Correlation	.313**	1				
	Sig. (2-tailed)	.000					
	N	292	292				
COP	Pearson Correlation	.458**	.495**	1			
	Sig. (2-tailed)	.000	.000				
	N	292	292	292			
PA	Pearson Correlation	.343**	.358**	.434**	1		
	Sig. (2-tailed)	.000	.000	.000			
	N	292	292	292	292		
COM	Pearson Correlation	.399**	.394**	.504**	.515**	1	
	Sig. (2-tailed)	.000	.000	.000	.000		
	N	292	292	292	292	292	
EPER	Pearson Correlation	.480**	.514**	.626**	.662**	.715**	1
	Sig. (2-tailed)	.000	.000	.000	.000	.000	
	N	292	292	292	292	292	292

** . Correlation is significant at the 0.01 level (2-tailed).

Source: Own survey, 2023

As indicated in Table 4.9 the relationship among all the variables was found by using Pearson’s correlation coefficient. The correlation (r) value of career opportunity, performance appraisal and compensation showed $r = 0.626, 0.662$ and 0.715 , respectively. This result showed that all these three predictors had positive and strong relationship with employee performance in the study area.

For hiring and training their r value = 0.480 and 0.514 respectively, which showed that these two variables had positive and moderate relationship with employee performance in the study area. From the correlation results, it can be concluded that career opportunity, performance appraisal and compensation had positive and strong relationship with employee performance in the study area; hiring and training had also positive and moderate relationship with employee performance.

4.4.2 Regression Analysis

Regression analysis is a statistical method that relates one dependent variable to a linear combination of one or more independent variables. Regression identifies how much each independent variable has an effect on dependent variable. Multiple regression analysis calculates multiple correlation coefficients and R-square (Kerlinger and Lee, 2000).

According to Kothari, (2004) regression analysis is a statistical method to deal with the formulation of mathematical model depicting relationship amongst variables which can be used for the purpose of prediction of the values of dependent variables, and given the values of the independent.

Linear regression estimates the coefficients of the linear equation, involving one or more independent variables that best predict the value of the dependent variable. Multiple regression analysis in this research was used to model the value of the construct variable (employee performance) based on its linear relationship to two or more predictors (hiring, training, career opportunity, performance appraisal and compensation). This means, the employee performance is an aggregation of the above predictors (five dimensions of HRMP). In order to indicate the effect that each predictor has on the construct variable, the unstandardized coefficients are used.

4.4.3 Testing Assumptions of Multiple Regression Model

Before analyzing multiple regression models, the study assessed whether the collected data satisfied multiple regression model assumptions or not. In this study, the assumptions of multiple linear regression models including linearity, multicollinearity, homoscedasticity and normality tests were conducted and all the conditions have been fulfilled. The detail of the assumption was presented as follows:

Assumption 1: Multicollinearity Test

As presented Table 4.10, the value of VIF i.e., Variance Inflation Factor which tests multicollinearity of variable was less than 10 and Tolerance greater than 0.1 for all independent variables under study. It means that none of the independent variables are highly correlated with each other. Thus, there was no multicollinearity problem.

Table 4.10: Multi-collinearity test

Model	Collinearity Statistics	
	Tolerance	VIF
Hiring	.741	1.350
Training	.714	1.401
1 Career opportunity	.579	1.727
Performance appraisal	.677	1.477
Compensation	.610	1.639

Dependent variable: Employee performance

Source: Own survey, 2023

Assumption 2: Linearity Test

Linearity refers to the degree to which the change in the dependent variable is related to the change in the independent variables. To determine whether the relationship between the employee’s performance and the predictor variable (dimensions of HRMP at the study public sector), is linear; plots of the regression residuals had been used. As shown in figure 4.1 below graph the scatter plot of residuals shows no large difference in the spread of the residuals as you look from left to right on the diagonal on figure. This result suggests the relationship we are trying to predict is linear.

Figure 4.1: Linearity test

Source: Own survey, 2023

Assumption 3: Normality Test

Normality assumes that the data must be normally distributed. The normal distribution of data characterized as bell-shaped means that the data has spread evenly so that it can represent the population. The assumption is checked by histogram the frequency distribution of the standardized residual of employee performance. As revealed in figure 4.2, the histogram is bell-shaped and error terms are normally distributed.

Figure 4.2; Normality test

Source: Own survey, 2023

Assumption 4: Homoscedasticity Test

Assumptions of the same degree of estimate point to equal error variance at all levels of independent variables. This means that the errors are constantly disseminated between the variables. The visual inspection of standardized residual plots can be confirmed by visual inspection of standardized residual correspondence with standardized regression predicted values. If the dispersion is not uniform, heterothermal heat is shown. Forms of fans and butterflies are general violation patterns. Hence, the researcher has created a scattering plot of standardized residual. As shown in figure 4.3, the standardized residuals in this study are uniformly distributed and the conclusion is that heteroscedasticity is not a serious problem in the data.

Figure 4.3: Homoscedasticity Test

Source: Own survey, 2023

4.4.2.2 Result of Regression Analysis

This section presents result of regression analysis of model summary, ANOVA and multiple regression coefficients as follows: In this section the value of R, R Square and Adjusted R Square are presented in order to determine how well a regression model fits the data.

Table 4.11: Model summary

Model	R	R Square	Adjusted R Square	Std. Error of the Estimate
1	.839^a	.703	.698	.50560

a. Predictors: (Constant), compensation, training, hiring, performance appraisal, career opportunity

b. Dependent variable: Employee performance

Source: Own survey, 2023

Table 4.11 R- value represents the correlation strength between dependent variable and independent variables of the study. The value 0.839 indicates strong correlation between dependent and independent variables of the study.

Coefficient of determination or R^2 measures what percentage of a change in the dependent variable can be measured or explained by the change in the independent variables. It also explains

the level of the explanatory power. As indicated in the model summary of the analysis on table 4.11 above, the value of R^2 (.703) indicated relationship of the five independent variables (HRMP) with the dependent one affecting 70.3% of the variance of Employee performance. However, the remaining percent (29.7%) was explained by other variables not included in this study. The R square and adjusted R square column shows small variation b/n the two values (.703 and .698 respectively) justifying that HRMP have strong ability to predict the variation in employed in the study area.

The standard error (in this study 0.50560) of a model fit is a measure of the precision of the model. It is the standard deviation of the residuals. It shows how wrong one could be if s/he used the regression model to make predictions or to estimate the performance of employees. As R^2 increases the standard error will decrease. On average, the estimates of employee performance with this model will be wrong by 0.50560 (minimal), which is the model used in the study will have minimal effect of errors associated with it.

Analysis of Variance

The purpose of ANOVA test is to show whether the model is significantly better at predicting the dependent variable (performance of employees) in the study area. ANOVA result is discussed as follows

Table 4.12: ANOVA

Model	Sum of Squares	<i>Df</i>	Mean Square	<i>F</i>	<i>Sig.</i>
1 Regression	173.323	5	34.665	135.602	.000 ^b
Residual	73.112	286	.256		
Total	246.434	291			

a. Dependent variable: Employee performance

b. Predictors: (Constant), compensation, training, hiring, performance appraisal, career opportunity

Source: Own survey, 2023

As indicated in Table 4.12 of ANOVA test, F value of 135.602 is significant at $p < 0.05$. Therefore, it can be inferred that with 70.3% of variance (R Square), the five independent variables (predictors) are significant and the model appropriately measured the dependent variable employee performance. This means, the regression model predicts overall employee performance and has been

significantly explained by the independent variables, hiring, training, career opportunity, performance appraisal and compensation in the study area.

Regression Coefficient

Multivariate regression model was used to examine how hiring, training, career opportunity, performance appraisal and compensation affect employee performance in Enore Enere and Meger worda public sectors. The regression compares the magnitude of the coefficients of the independent variables to determine which one had more effects on employee performance in the study area. The results are narrated as follows;

Table: 4.13 Regression Coefficients

Model	Unstandardized Coefficients		Standardized Coefficients	T	Sig.
	B	Std. Error	Beta		
(Constant)	.152	.144		1.053	.293
Hiring	.100	.039	.097	2.584	.010
Training	.149	.043	.132	3.457	.001
Career opportunity	.212	.045	.199	4.698	.000
Performance appraisal	.302	.039	.306	7.828	.000
Compensation	.337	.038	.366	8.882	.000

a. Dependent Variable: Employee performance

Source: Own survey, 2023

As presented in Table 4.13 the value of unstandardized coefficients indicate how much the dependent variable varies with an independent variable when all other independent variables are held constant. The regression coefficient provides the expected change in the dependent variable for a unit increase in the independent variable. In this study the researcher used the following model specification by using unstandardized coefficient values to measure the contribution of each predictor to employee performance in the study area.

$$\text{Employee performance} = .152 + .100x_1 + .149x_2 + .212x_3 + .302x_4 + .337x_5$$

Where: x_1 , x_2 , x_3 , x_4 , and x_5 are independent variables of the study (i.e. hiring, training, career opportunity, performance appraisal and compensation) respectively.

As presented on Table 4.13, the regression constant value showed that when the predictors such as hiring, training, career opportunity, performance appraisal and compensation are constant at zero, performance of employee will be at beta value of 0.152.

From the above regression equation, the researcher found that keeping all other variables constant, for every one-unit positive change on hiring, the percentage of employee performance will increase by 10.0 percent in the study area. This implies that hiring has significant positive contribution for the improvement of employee performance. This finding is supported by previous studies of Janet (2019) found effective hiring practices leads to improve performance of the staff.

For every one-unit positive change on training, the percentage of employee performance will increase by 14.9 percent in the study area. This implies that training has significant positive contribution for the improvement of employee performance. This finding is supported by previous studies. Abebe, Mesele, & Lemessa(2015) revealed that training has significant contribution on employee performance and effectiveness. Similarly, Mohamud (2014) found that training had significant contribution on enhancing performance of the staff.

For every one-unit positive change on career opportunity, the percentage of employee performance will increase by 21.2 percent in the study area. This implies that career opportunity has significant positive contribution for the improvement of employee performance. This is in line with the study of Khalid et al. (2014) revealed career planning provided by organizations inspires the individual employees in the organization to excel in performance.

For every one-unit positive change on performance appraisal, the percentage of employee performance will increase by 30.2 percent in the study area. This implies that performance appraisal has significant positive contribution for the improvement of employee performance. This is consistent with the study of Moraa and Datche(2019) found that performance appraisal has significant contribution on performance of employees.

For every one-unit positive change on compensation, the percentage of employee performance will increase by 33.7 percent in the study area. This implies that compensation has significant positive contribution for the improvement of employee performance. This is consistent with study

of Onyekwelu et al. (2020) found compensation practices led to the motivation of workers leading to increased productivity. Out of these five HRMP dimensions, compensation has the highest contribution, followed by performance appraisal, then career opportunity and after that training, whereas hiring has least contribution on employee performance in the study area. This implies the study sectors should give more attention to compensation, performance appraisal and career opportunity as they have more contribution on employee performance, even though other variables should not be ignored.

4.4.2.3 Hypothesis testing

As noted by Pallent (2016) the general rule to reject H_0 (null hypothesis) if $p < 0.05$ and accept H_0 if $p \geq 0.05$. The hypotheses which were developed in the first chapter were tested based on p-value (sig.) of regression coefficients results. The T and p (sig.) value indicated that the significance effect of the five HRM dimensions on dependent variable (employee performance). The smaller the value of significance or p-value and the larger the t-value the greater the contribution of that predictor. All these values are significant at 5% significant level. Hence, the five H_0 hypotheses were tested accordingly;

For hiring in the study sectors the value of ($t = 2.584$; $p = .010$, $p < 0.05$), as a result it has statistically significant effect on employee performance. Hence, the first null hypothesis (H_{01}) which states hiring has no significant effect on employee performance in the study area is rejected.

For training the value of ($t = 3.457$; $p = .001$, $p < 0.05$), as a result it has statistically significant effect on employee performance. Hence, the second null hypothesis (H_{02}) which states training has no significant effect on employee performance in the study area is rejected. This is in line with Singh and Biniam (2016) found training and development has a significant effect on staff performance.

For career opportunity the value of ($t = 4.698$; $p = .000$, $p < 0.05$), as a result it has statistically significant effect on employee performance. Hence, the third null hypothesis (H_{03}) which states career opportunity has no significant effect on employee performance in the study area is rejected. For performance appraisal the value of ($t = 7.828$; $p = .000$, $p < 0.05$), as a result it has statistically significant effect on employee performance. Hence, the fourth null hypothesis (H_{04}) which states

performance appraisal has no significant effect on employee performance in the study area is rejected.

For compensation the value of ($t = 8.882$; $p = .000$, $p < 0.05$), as a result it has statistically significant effect on employee performance. Hence, the fifth null hypothesis (H_{o5}) which states compensation has no significant effect on employee performance in the study area is rejected. This is consistent with Onyekwelu et al. (2020) found compensation practices have significant effect on workforce productivity.

Table 4.14: Summary of tested hypothesis

Hypotheses	β value	Sig.(p-value) at 5% of significance level	Results
Ho1: Hiring has no significant effect on employee performance in the study area	$\beta = 0.100$	$p = .010$, ($p < 0.05$)	Rejected
Ho2: Training has no significant effect on employee performance in the study area	$\beta = 0.149$	$p = .001$, ($p < 0.05$)	Rejected
Ho3: Career opportunity has no significant effect on employee performance in the study area	$\beta = 0.212$	$p = .000$, ($p < 0.05$)	Rejected
Ho4: Performance appraisal has no significant effect on employee performance in the study area	$\beta = 0.302$	$p = .000$, ($p < 0.05$)	Rejected
Ho5: Compensation has no significant effect on employee performance in the study area	$\beta = 0.337$	$p = .000$, ($p < 0.05$)	Rejected

Source: (Own survey data, 2023)

As shown Table 4.14 the p- value of hiring ($p = 0.010$, $p < 0.05$), training ($p = 0.001$, $p < 0.05$), career opportunity ($p = 0.000$, $p < 0.05$), performance appraisal ($p = 0.000$, $p < 0.05$) and compensation ($p = 0.000$, $p < 0.05$). The result indicated that all these five dimensions HRM have significant effect on employee performance in the study area. Therefore, H_{o1} , H_{o2} , H_{o3} , H_{o4} and H_{o5} are **rejected** and their alternative forms are **accepted**. This is consistent with previous study by Mufeed and Gulzar (2015), selection, job definition, career planning, performance appraisal system, training and compensation have significant effect on employee performance & as a result they have great contributions on improvement of organizational performance. Similarly, Marwat,

Qureshi and Ramay, (2015) conducted training, compensation, and performance appraisal, have significant effect on perceived employee performance.

CHAPTER FIVE

SUMMARY, CONCLUSIONS AND RECOMMENDATIONS

This study was aimed to investigate the effects of human resource management practices on employee's performance the case of Enore Enere and Meger Woreda public sectors in Gurage Zone. To realize the level of HRM practices namely hiring, training, career opportunity, performance appraisal and compensation their aggregate mean was used. In order to identify the relationship and effect of each independent variable on the dependent variable, correlation and multiple regression analysis respectively were employed. In this chapter, summary of major findings, conclusions, suggested recommendations and future research directions are illustrated as follows:

5.1 Summary of Major Findings

The purpose of this study was to investigate the effect of human resource management practice on employee performance a case of Enore Enere and Megerworeda public sectors in Gurage Zone. To achieve this general objective of the study, five specific objectives and five null hypotheses were raised to assess the area of the problems. Based on the results of data analyses, the summaries of major findings are presented below.

- ✓ The study indicated that the aggregate mean score of HRM practices (hiring, training, career opportunity, performance appraisal and compensation) were 2.99, 2.97, 3.15, 3.13, and 3.23 respectively. These mean values lie between the mean ranges of 2.61-3.4 and felt in average/moderate level. These results showed that numbers of employee respondents (25.82%, 34.53%, 29.74%, 29.5% and 30.92%) respectively were not fully satisfied on level of practice of hiring, training, career opportunity, performance appraisal and compensation in the study area. All these results indicated that the stakeholders need improvement in practicing these identified HRM practices in the study area.
- ✓ From descriptive analysis result it can be identified that level of employee performance has got aggregate mean of 3.29, which lies between the ranges of 2.61-3.4 and falls average mean score. The result indicated that a number of (27.5%) employees of public sectors were not well performed their tasks under the study.

- ✓ From the correlation results, it can be concluded that career opportunity, performance appraisal and compensation had positive and strong relationship with employee performance in the study area; hiring and training had also positive and moderate relationship with employee performance.
- ✓ From the regression analysis result the researcher found that keeping all other variables constant: for every one-unit positive change on hiring, the percentage of employee performance will increase by 10.0 percent in the study area, for every one-unit positive change on training, the percentage of employee performance will increase by 14.9 percent, for every one-unit positive change on career opportunity, the percentage of employee performance will increase by 21.2 percent, for every one-unit positive change on performance appraisal, the percentage of employee performance will increase by 30.2 percent and for every one-unit positive change on compensation, the percentage of employee performance will increase by 33.7 percent in the study area.
- ✓ Also the study revealed that the p- value of hiring ($p=0.010$, $p < 0.05$), training ($p=0.001$, $p < 0.05$), career opportunity ($p=0.000$, $p < 0.05$), performance appraisal ($p=0.000$, $p < 0.05$) and compensation ($p=0.000$, $p < 0.05$). The result indicated that all these five dimensions HRM have significant effect on employee performance in the study area. Therefore, H_{01} , H_{02} , H_{03} , H_{04} and H_{05} are **rejected** and their alternative forms are **accepted**.

5.2 Conclusions

The study was carried out to investigate the effect of human resource management practice on employee performance in Enore Enere and Meger worda public sectors in Gurage Zone. The study has been set five specific objectives (to examine the effect of hiring on employee performance in the study area, to examine the effect of training on employee performance, to analyze the effect of career opportunity on employee performance, to analyze the effect of performance appraisal on employee performance and to explore the effect of compensation on employee performance in the study area).

The result of regression analysis showed that five of independent variables (i.e., hiring, training, career opportunity, performance appraisal and compensation) had significant effect on the dependent variable (employee performance) in the study area. These implied that employee

performance has been positively affected by the existing hiring, training, career opportunity, performance appraisal and compensation practices in the study area.

The researcher concluded that out of these five HRMP dimensions, compensation has the highest contribution, followed by performance appraisal, then career opportunity and after that training, whereas hiring has least contribution on employee performance in the study area. This implies the study sectors should give more attention to compensation, performance appraisal and career opportunity as they have more contribution on employee performance, even though other variables should not be ignored.

Furthermore, the researcher concluded that numbers of employee respondents were not fully satisfied on level of practice of hiring, training, career opportunity, performance appraisal and compensation in the study area. Also, employees are not fully performing their tasks.

5.3 Recommendation

Based on the findings and conclusion the following recommendations were recommended for stakeholders

For Government

- The study findings revealed that compensation was the highest contributing predictor to explain employee performance. Hence, the woreda public service should give priority to improve current status of compensation by revising its compensation policy and should implement a more fair incentives system that provides the employees with the benefits they need other than the basic salary, like annual financial bonus, promotion, and prepare recognition events.

For the study sectors

- The study found hiring has significant effect on employee performance, therefore the woreda public service should be able to attract suitable applicants to fill its vacancies, the sectors should make recruitment and selection process clear and transparent, and they should give formal orientation and familiarization process designed to help new recruits understand the organization.
- Since performance appraisal has significant contribution on employee performance, hence

management of study public sectors should appraise employees properly, performance evaluation criteria and standards of the sectors should be based on job, and openly discuss the performance appraisal result with appraiser and provide performance based feedback and counseling. Also the sectors should take, a corrective measure when the result of performance appraisal is under the expected standard in order to improve employees performance

- The study depicted that training has significant effect on employees' performance, hence the management of the study sectors should identify training needs of employees and update its employee's skills and knowledge through training to cope with technological advancement and competitive environment and to achieve its pre stated short and long term goals.
- Finally, the study confirmed that career opportunity has significant effect on employee performance, hence leaders of the study sectors should identify career path for employees properly, design and implement the system that provide opportunities for employees to develop and improve their skills, knowledge and new technologies, properly use career paths through the junior position and end with the most senior position and should give written job description for their employee in order to improve employees performance.

5.4 Future Research Direction

This study was limited in its scope to only public sectors in EnoreEnere and MegerWoreda of Gurage zone. Further researchers may conduct on private organizations and ready to compare their findings. The study was limited due to its descriptive and explanatory research design. However, these types of relationships may need a longitudinal analysis, so further researches should investigate this relationship over a longer period of time. Finally, the study findings established that the five HRM dimensions contribute only 70.3% of the variations in employee performance. This implies that 29.7% of the variations in employee performance are contributed by other variables not studied. Therefore, other HRM dimensions should be considered for further study in order to establish their contributions.

APPENDEX-I: QUESTIONNAIRE

**WOLIKITE UNIVERSITY SCHOOL OF POSTGRADUATE STUDIES
COLLEGE OF SOCIAL SCIENCE AND
HUMANITIES DEPARTMENT OF GOVERNANCE AND DEVELOPMENT
STUDIES QUESTIONNAIRE FOR EMPLOYEE
RESPONDENTS**

Dear Respondent!

This questionnaire has been designed to seek information purely for academic purposes. This research will be conducted as a partial fulfillment of the requirement for the degree of Master of Art in Development Management under the title “*The Effect of Human Resource Management Practice on Employees’ Performance*”: *A Case of Enore Enere And Meger Woreda Public Sectors in Gurage Zone*”. Thus, your participation in giving reliable information has a very important contribution for the success of this study. So, I politely request your kind cooperation in answering the questions as clearly and accurately as possible. I would like to assure you that the information you provide will be used for research purpose only and all responses will be treated in strict secrecy. Finally I would like to express my pleasure for your time, tolerance and carefulness in responding to this questionnaire and for allowing me to fulfill my objectives.

Sincerely!

Kurabachew Fikadu

Instructions

- ✓ No need of writing your name
- ✓ For Likert- scale type statements indicate your level of agreement with atick mark (✓) in the appropriate box.

7,001-8,500 8,501-10,000

10,001-11500 Above 11,500

5. Service year in public sector

Below 2 years 2 – 5 years

6 – 9 years 10-15 years Above 15 years

6. Write your sector

Part-II-Human Resource Management Practice

The following tables consist of the five independent variables of HRMP (Hiring, Training, Career opportunity, Performance appraisal and Compensation). Each table is composed of statements that the researcher believes can better explain the Human Resource Management Practice of public sectors in the study area. There are five blank boxes beside each statement listed. The five numbers above the boxes represents the degree in which the respondents agree with each statement. Therefore, the respondents are kindly requested to put “√” mark in the box that describes their feeling.

1=Strongly Disagree (SD), 2=Disagree (DA), 3= Neutral (N), 4=Agree (A) and 5=Strongly Agree (SA)

S.No	Human Resource Management Practice Related Questions	1	2	3	4	5
		SD	DA	N	A	SA
Hiring Practice						
1	The hiring decisions in Enore Enere and Meger Woreda Public service are determined by the candidates' ability to undertake the technical aspect of the job requirements					
2	Public service is able to attract suitable applicants to fill its vacancies					
3	Recruitment and selection process in public service is clear and transparent					
4	The sectors employees are the most qualified candidates					
5	The sector has formal orientation and familiarization process designed to help new recruits understand the organization					
Training Practice						
		SD	DA	N	A	SA
1	In my organization training needs are identified through a formal performance appraisal mechanism					
2	In my organization training programs are designed and developed based on the analysis of employee's skill, knowledge and attitude gaps					
3	My organization provide extensive training programs for employees in all aspects					
4	In my organization employee training is used to improve staff					
5	My organization evaluates effectiveness of training after training program					
6	I feel better equipped to tackle unexpected events with skill and confidence					
Career Opportunity						
		SD	DA	N	A	SA
1	Leader identifies career path for employees in my organization					
2	I received information regarding job postings that are available in the organization to aspire me					
3	My organization use career paths through the most junior position and end with the most senior position					
4	I have given written job description from my leader /director/					
5	My organization designed favorable systems that provide opportunities for me to develop and improve my skills, knowledge and new technologies					
Performance Appraisal Practice						
		SD	DA	N	A	SA
1	In my organization there is a formal and written performance appraisal system					
2	The objectives of the performance appraisal system are clear to me					
3	Performance evaluation criteria and standards of my Organization are based on job description					
4	I openly discuss the performance appraisal result with appraiser and provide performance-based feedback and counseling					

5	Corrective measures have taken when the result of performance appraisal is under the expected standard					
Compensation Practice		SD	DA	N	A	SA
1	My organization provides a competitive compensation and benefits package when compared to other organizations of publicsectors					
2	My pay is appropriate when it is compared with that of other workers with similar duties/responsibilities within the organizations					
3	My organization compensates me for extra duties and responsibilities					
4	My organization recognize and reward employees appropriately basedon individual performance in the year					
5	I feel my organization compensates me fairly for the work I do					
6	I am satisfied with the amount of reward and benefits I receive					
Employee Performance Related Questions		SD	DA	N	A	SA
1	I complete my job accurately and timely to achieve the work objective					
2	I establish my job objectives with regard to the department and organization goals					
3	I effectively work with other employees					
4	I produce high quality work					
5	I have a complete knowledge & understanding while performing my tasks					
6	I perform my work to the expected standards					

Thank You for Your Cooperation!!!

APPENDIX-II: INTERVIEW GUIDE

WOLIKITE UNIVERSITY SCHOOL OF POSTGRADUATE STUDIES

COLLEGE OF SOCIAL SCIENCE AND HUMANITIES

DEPARTMENT OF GOVERNANCE AND DEVELOPMENT STUDIES

Interview Questions for leaders of Enore Enere and Meger Woreda Public Sectors

This interview questions is designed for leaders. The purpose of this interview questions is with the assumption that a better and open responses will be given and the reliability of the data and quality may be improved

1. How does your organization hire employees?

.....
.....
.....
.....

4	የአፈጻጸም ምዘና ውጤቱን በተመለከተ ከገምጋሚው ጋር በግልፅ እወያያለሁ፤ በአፈጻጸም ላይ የተመሰረተ አስተያየት እና ምክር ከሃላፊያ አገኛለሁ					
5	የአፈጻጸም ምዘና ውጤቱ ከሚጠበቀው ደረጃ በታች ሲሆን በመመሪያው መሰረት ተገቢውን የማስተካከያ እርምጃዎች ይወሰዳል					
የክፍያ አተገባበር		1	2	3	4	5
1	የእኔ መስሪያ ቤት ከሌሎች የመንግስት ተቋማት ጋር ሲወዳደር ተወዳዳሪ የክፍያ እና ጥቅማ ጥቅሞችን ያቀርባል					
2	የእኔ ክፍያ በመስሪያ ቤቱ ውስጥ ተመሳሳይ ተግባር/ኃላፊነት ካላቸው ሠራተኞች ክፍያ ጋር ሲወዳደር ተመጣጣኝ ነው					

3	መስሪያ ቤቱ ለተጨማሪ ስራዎች እና ኃላፊነቶች ተጨማሪ ክፍያ ይፈጽምልኛል					
4	መስሪያ ቤቱ በዓመቱ ውስጥ በስራ አፈጻጸማቸው የተሻለ ውጤት ላስመዘገቡ ሰራተኞችን በአግባቡ እውቅና በመስጠት ይሸልማል					
5	ለምሠራው ስራ መስሪያ ቤቱ ተመጣጣኝ ክፍያ እንደሚሰጠኝ የሰማኛል					
6	ባገኘሁት ማበረታቻ እና ጥቅማ ጥቅሞች ረክቻለሁ					

የሰራተኛ አፈጻጸም ያለበት ደረጃ		1	2	3	4	5
1	የሥራውን ዓላማ ለማሳካት ሥራዬን በትክክል እና በጊዜ አጠናቅቃለሁ					
2	ከመስሪያ ቤቱ እና ከስራ ሂደቱ የስራ ዓላማዎች በመነሳት የራሴን የስራ ዓላማዎችን አውጥቼ አከናውናለሁ					
3	ከሌሎች ሰራተኞች ጋር ውጤታማ በሆነ መንገድ እሰራለሁ					
4	ከፍተኛ ጥራት ያለው ሥራ እንደምሠራ አምናለሁ					
5	ስራዬን በምሰራበት ጊዜ ስለምሠራው ስራ የተሟላ እውቀት እና ግንዛቤ አለኝ					
6	ሥራዬን በሚጠበቀው ደረጃ አከናውናለሁ ብዬ አምናለሁ					

ስለ ትብብርዎ አመሰግናለሁ !!!

ለስራ ሃላፊዎች የተዘጋጀ የቃለ መጠይቅ ጥያቄዎች

1. የወረዳው ፕቢሊክ ሰርቪስ ሰራተኞችን የሚቀጥረው እንዴት ነው? አሠራሩን ያብራራልኝ

.....
.....
.....

2. መስሪያ ቤትዎ ለሰራተኞቹ በቂ ስልጠና ይሰጣል? መልስዎ አዎ ከሆነ እንዴት? አይ ከሆነ ለምን?

.....
.....
.....

3. በመስሪያ ቤትዎ ውስጥ ላሉ ሰራተኞች ምን አይነት የሙያ እድሎች ተዘጋጅተዋል?

.....
.....
.....

4. መስሪያ ቤትዎ /ተቋምዎ/ የሰራተኞቹን አፈጻጸም እንዴት ነው የሚገመግመው? ሂደቱን ያብራራልኝ።

.....
.....
.....

5. የክፍያ ስርዓቱ ሰራተኞችን ያረካል ብለው ያስባሉ? ለምን?

.....
.....
.....

.....እርስዎ የሰራተኞችን አፈጻጸም በምን ደረጃ ላይ ነው ብለው ያምናሉ? ለምን?

.....
.....
.....

በጣም አመሰግናለሁ!
